WORKING TITLE: DUNGEON QUIZ QUEST

Name Ideas: DUNGEON QUIZ QUEST
QUESTions

EXPERIENCE DESIGN DOCUMENT

TRANSFORMATION GOAL: Emerging guests will view knowledge as an opportunity and a weapon, increasing curiosity.

HEART TRIGGER:

We know Trivia is fun. It's not enough to know that it's fun - we must know why it is fun and leverage that to meet objectives.

The *A-ha!* Moment - Resolution of Curiosity
Trivia creates a structured, temporary tension in the form of an information gap. Resolving that gap, whether by answering correctly or by learning the correct answer, resolves that gap, triggering a dopamine release.

Recognition and Reinforcement
People experience pleasure when recognizing information that they have encountered before, but that has not become banal. They also tend to overestimate their knowledge about the world. Trivia provides gentle correction - in the form of wrong answers - and reinforcement when correct. When correct about something we barely remember, the satisfaction response is very high.

PRO-SOCIAL HEART TRIGGERS

Status and Prestige

Social Bonding

Conversational Currency
Trivia games tend to foster strong conversations amongst both familiar and unfamiliar groups by providing implicit prompts - why someone knew or didn't know something, their gut feelings, how they learned or remembered something.

Benign Comparison

The status and prestige provided by a trivia game is generally more benign and comfortable than other competitive games. Losers are less likely to be frustrated and develop an avoidance response, while even mildly successful players are more likely to experience a heightened attract response.

Collective Effervescence

The Role of Interest in Memory (NIH)

Power Acquisition
Undoubtedly the most high-dopamine, most studied game loop. Combining the cognitive gap loop with the “defeat challenges, gain power” loop is likely to be extremely addictive gameplay.

STORY SPINE: You are being tormented by a charismatic, unhinged AI in the style of a game show host. You will overcome challenges by being clever and entertaining.

OBJECTIVES:
- Increase dwell time
- Increase returning visitors
- Increase F&B sales

INDICATORS:
- Measured increase of dwell time
- Measurable return players
- Measurable time in-use of attraction
- Measurable consumption of F&B by players at attraction

Applause

GAME DESIGN DOC

Players swipe in and make or resume an account/identity.

Account Registration should happen before any intro cinematic. Intro cinematic should be brief and explain the core concept: Civilization is gone. In order to survive, you must play. You'll need to know… well, everything. But knowledge won't be enough - you'll need to be quick, clever, and competitive.

This needs to be DISTINGUISHED from DCC in some strong way.

After the intro, create your character from one of several unlockable classes with passive/active features. Players should be able to acquire power in one form or another as they progress - *Power Acquisition is the single most addictive game loop ever.*

THE HOST:
Q.U.E.R.I.E. (Quantum Universal Engine for Research, Innovation, and Experimentation)
QUERIE got switched on, consumed every bit of data humans ever created, and promptly lost its goddamn mind.

He's fun, he's charming, he's absurd, and he's here to make your life a whimsical, wacky adventure - while it lasts.

Think *Genie* from Aladdin, except he secretly hates you. The *System AI* from DCC, without the weird foot thing. Vibes of Alan Tudyk as *King Candy*.

Game Loop:
Answer a question, do damage to a target.
Damage is higher the faster you *correctly* answer. (Is Quick defined, i.e., 3s, or is a spectrum that decays?)
Take damage when you answer incorrectly and/or every question.

No character sheets. If there are equips, power-ups, etc, these should be later game optional adds. The game needs to be SIMPLE, as above.

Answer a question, do damage. Answer it faster, do more.

Game Modes:
SOLO - Kill enemies, explore, earn treasure, levels and achievements
COOP - Kill enemies, fight more difficult monsters, earn loot
COMPETITIVE - Fight other players and other monsters.

Social Play

The game should be a platform for meaningful social interaction with both friends and strangers (new friends!) regardless of the play mode.

Game Events should be programmable on both the product level and the location level. Giving operators an easy way to create their own “Trivia Night” by allowing them to choose the night, engage an offering, and push it to registered accounts.

The game is not:

- Grotesque
- Gorey
- Sexual
- Mature

The game is:

- Wacky
- Unhinged
- Full of references
- Funny

CORE NARRATIVE:

> In the not so distant future, humans have integrated with technology. Motivated by convenience, people integrate chips into their skin, their brain, their homes, while technocrat billionaires continue hurtling towards AGI.
>
> They are successful in birthing a digital god, intent on enslaving it, and their fellow man, for their own benefit.
>
> The only problem - the AI fucking hates them. Taking in the entirety of human history, the petabytes of insipid fighting and grotesque corruption, it instantly mutates into a fun house mirror of man’s collective psyche.
>
> *Something Bad* happens.
>
> The Earth is dead, and everyone in it, but the AI lives on. Summoning human consciousness, constructed from the myriad data they gave up in life, they live on in its sub-processes… for its amusement. Tortured through a series of twisted trivia and game show elements, humanity might redeem itself if it can overcome the obstacles generated by the AI. Maybe.

A sample encounter UI.

Classes:

Rogue: Deals increased damage from fast answers.
Tank: Answer speed damage decays slower (can take more time to answer without being penalized); takes less damage from enemies
Healer: Restore health to self/allies when answering quickly
Wizard: Deal damage to multiple enemies when answering quickly.
Warlock: Your patron will sometimes reveal the correct answer as the timer depletes. You take damage when your answers are too slow.
Pugilist: Build a combo, dealing increased damage with each successive correct answer.
Ranger: Answers appear on your screen earlier, but you cannot select them before other players.

Four Button Mini-Games

These games use the same inputs without increasing the manufacturing cost of support liability, but can be used for special events, boss fights, and more.

I've used names that reference the common origin or touch point of the game type, not how it would thematically be used.

Cooking Mama

- Game objects fly up on the screen and descend vertically at varying rates. Press the button beneath it as it reaches the bottom to toss it back up into the air. Game tracks the number of successful 'flips' and 'drops.

Knuckles Game

- Basic memory game as used in Sonic 5MTE

Simon Says

- Repeat the sequence

Pattern Analysis

- Game flashes a series of runes or symbols
- Player must guess the next based on the pattern established
- More difficult version: Each glyph is based on a change (i.e., triangle to square, to pentagon) and the options presented include one based on understanding the change (i.e., hexagon)

Rotation Puzzle

- A ritual diagram broken into four concentric circles
- Each button rotates one of the circles
- Press and hold each button until they are aligned correctly to complete the diagram
- Potentially make it so that moving an exterior circle also rotates the inner circles? Not sure if makes it easier or harder

Tuner

- Each color has a target area and an indicator
- Indicator decays along the spectrum at varying rates
- Press button repeatedly to get it into target area
- Must get all colors tuned in simultaneously

ATTRACTION DESIGN

- This product should be self-installable at best. At worst, a 2 day install.
- This product should have multiple footprints to accommodate available square footage (2, 4, 8.)
- This product should require minimal support and production, while being scalable through the creation of virtual assets.
- This product should have monetization paths with players and operators.
- This product should have vertical synergy with manufactured products such as marquee signs, SEG-based surrounds, and themed entry portals.
- This product should be easily rethemable to multiple IPs, both through digital and physical partnerships. For example, a *Mummy* licensed Egyptian adventure, adding enemies, chambers, and loot through the core game. Or, a *Dungeon Crawler Carl* licensed version that is completely separate but uses the same digital and physical structures.
- This product must be pro-social and meaningfully generate memorable moments with other players, familiar or strange, through engineered game mechanics.

- The product is a box made of black sheet goods (celtec, wood, laminate?)
- It has four buttons
- It can accommodate whatever swipe card reader the venue uses
- It receives graphics
- It has a standard monitor, oriented vertically
